

DoorGuard Package

DoorGuard was developed by Codel Doors to provide protection of the door during delivery and installation. Cardboard protects both faces of the door, and the corners of the brickmould from damage; and plastic shrinkwrap helps keep the door clean.

SillGuard is a durable plastic sill cover that protects the sill from damage and jobsite debris.

JambGuard is a steel reinforcement plate that is installed to the backside of the jamb, at the deadbolt location, on a single prehung door. This provides greater strength to the jamb against break-in force.
